

Farmhouse Stoves

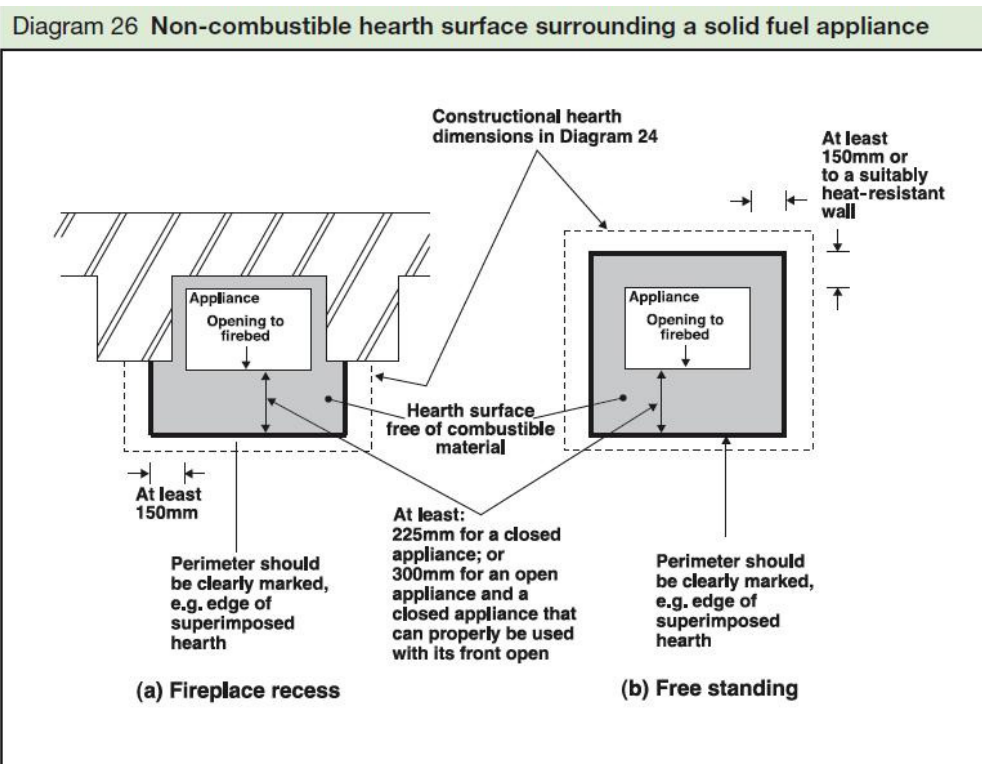

your burning ambition

Hearths For Stoves

The idea of a hearth for a stove is that the stove sits on a slab of non-combustible material that protects any combustible materials underneath and around the stove from the heat of the stove and from any burning fuel that might accidentally fall out from the stove.

Nothing Combustible 600mm (24") Either Side Or 400mm (16") Above The Stove
Ideally 150mm (6") Air Clearance Around The Stove. Min 50mm (2") To The Rear.
(Sides 150mm (6") To Fire Board. 100mm (4") To Tile. 50mm (2") To Brick)
Subject To The Stove Manufacturers Recommendation

Hearth Size

The stove must sit on a hearth of non-combustible material extending a minimum of 150mm (6") out from the stove at the sides and 300mm (12") in front.
